

If you have attempted to login to the AWS website and were not able enter it is most likely the following causes:

AWS uses the same credentials as WCA/EGLN/LOGNET/GAA and IFC8 so you should check one of the people listed on your membership website profile contacts and see if they changed the password as it is required to be changed every 90 days. If so, have them give you the new password and it will work at AWS.

The Password could be expired so you can go to your network website and attempt to login, if expired you will be prompted to change the password. Once you have the new password your AWS login issue will be resolved. Make sure others know of the change that need to access the network or AWS website.

Password is forgotten, on the network login page click on forgot password and an email will be sent to the contact listed on your website profile.

If you are not an official agent of AWS even if you are a member of one of the networks your password will not work because we must have an agency agreement on file before we can allow access to the website which contains rates, AMS etc.

I hope the above resolved your issue if not please send a message to kyle@allworldshipping.com for assistance.

The AWS Team
